

## FULL AIR RCC - lots of air in the helmet

With its central large-volume air openings the CASCO FULL AIR RCC achieves an enormously effective ventilation and allows an impressive high air flow rate even at steep mountain stages. The conspicuously huge central intake is only possible thanks to a sophisticated helmet construction and is based on the functioning of the CASCO time trail helmet SPEEDtime. The air intake is additionally increased by the included helmet shield that "catches" extra air. It is also used as a sun screen. The tearoff edges at the rear conform to the CASCO developed adaptive aerodynamic and make the helmet streamlined. According to the companies philosophy "The style of protection" CASCO again worked together with the approved design team and launches beyond functionality a really aesthetic product.

**Sizes:** 56-59 cm = M, 59-63 cm = L
